

Taking the Pulse of Global Health
Cluster Description & Course Offerings
(courses marked with * have prerequisites)

This cluster seeks to address individual and societal definitions of health; and how our notions of health are shaped by a variety of demographic factors (such as culture, age and sex). We will explore the major factors that lead to health and healthcare disparities within and across nations and develop ideas as to how to improve health and healthcare outcomes through interventions at the individual, institutional and governmental levels.
