

Connecting iPhone, iPad, & iPod Touch to **su-pirate**

iOS v. 7 and above

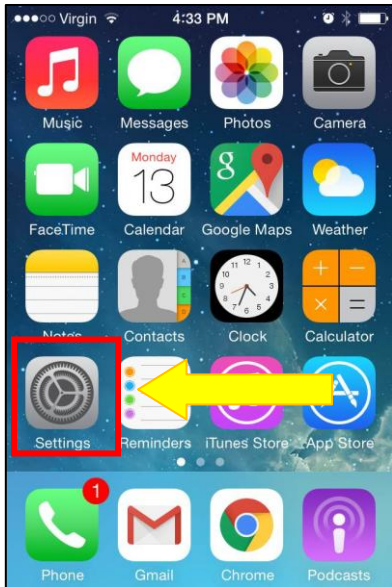

To check the version of the software on your iPhone or iPod Touch, tap “**Settings**,” then tap “**General**” and then tap “**About**”. Look at the number to the right of “Version” and make sure you are running at least version 7. If your device is running at an earlier version, you will need to upgrade your device through iTunes.

su-pirate is the name of the secure network at Southwestern. In order to connect your iPhone or iPod Touch to the su-pirate network, a few configuration steps are required. Once these are completed, you will not need to do them again to connect your device to the **su-pirate** network

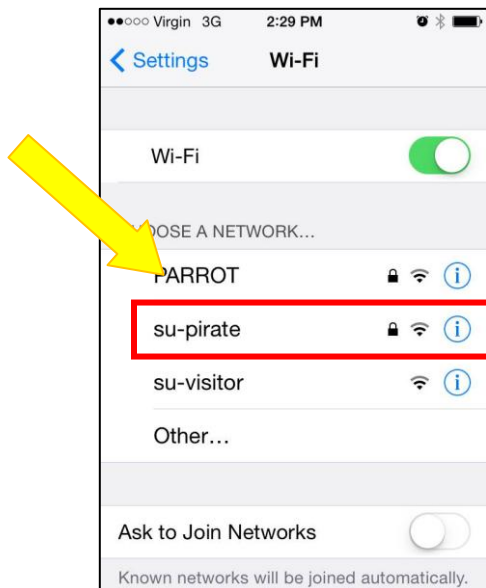

First ensure that your device's wireless is turned on. To do this, you may:

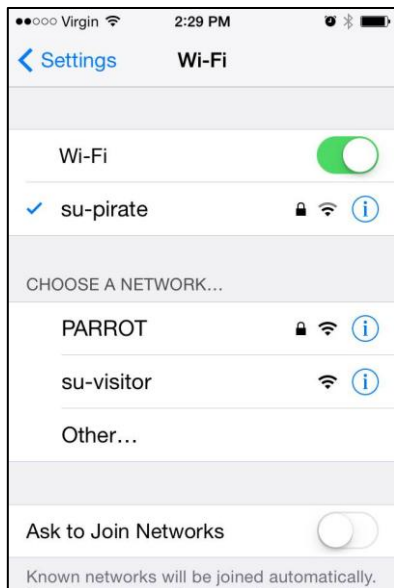

- Swipe up and see if the wireless icon is highlighted in white. If it is, then your wireless is on. If not, then select the wireless icon to turn it on.

- Or tap the “Settings” icon then “Wi-Fi”, and then tap the “On/Off” Switch to turn the wireless on. If the switch is green then your wireless is on.

Once the Wi-Fi is turned on, under “**Settings**” (you can get there by tapping the “Settings” icon) tap “**Wi-Fi**” and then tap the **su-pirate** network from the list of networks shown.

Enter your **SUeID** in the “Username” box and your **SUeID password** in the “Password” box. Then press “Join”. Please wait while your identity is verified. After a few seconds a check mark will appear next to the **su-pirate** network indicating that you are connected to **su-pirate**.
