Tarleton State University
Texas A&M University, Corpus Christi
Texas A&M International University
Texas A&M University, Texarkana
Texas Christian University
Texas Woman's University
The University of Texas at Arlington
The University of Texas at Austin
The University of Texas at El Paso
The University of Texas at Tyler
The University of Texas Health Science Center at Houston
The University of Texas Health Science Center at San Antonio
The University of Texas Medical Branch
The University of Texas - Pan American
University of the Incarnate Word
University of Mary Hardin-Baylor
West Texas A&M University

BSN (for transfer or second degree students)
The University of Texas Medical Branch

BSN Accelerated (for non-nurse college graduates)
The University of Texas Medical Branch

Direct Entry MSN (for non-nurse college graduates)
The University of Texas at Austin

Doctoral programs
Texas Woman's University
The University of Texas at Arlington
The University of Texas at Austin
The University of Texas Health Science Center at Houston
The University of Texas Health Science Center at San Antonio
The University of Texas Medical Branch

Numerous other programs exist across the country. For more information, visit www.allnursingschools.com.

Nursing Degrees
The professional nurse is a “registered” nurse (RN) who has completed a college-level program of coursework and clinical training and has passed a licensing examination required for practice in all states. The college level coursework can be completed at a community college which offers the associate degree in nursing (AS or ADN), a four-year college which offers a bachelor’s degree in nursing (BSN) or at a college or university which offers a master's degree (MSN) or doctoral degree (ND) in nursing for college graduates who do not have a degree in nursing. The latter two are generally referred to as direct entry programs. Thus individuals entering the nursing profession may choose between these four education routes. The MSN and ND programs are designed to prepare students for advanced clinical roles as well as research and management. These degree programs are most appropriate for students who have a clear idea of their long term interests in nursing.

Admission Requirements

Accelerated (or second degree) BSN programs for non-nurse college graduates focus on preparing students to complete the BSN and requirements for RN licensure. Some programs accomplish this in as little as 12 months while others require a few months more. Pre-admission requirements include a bachelor’s degree in a non-nursing discipline, a strong academic record and pre-requisite coursework in human anatomy, physiology, microbiology, chemistry, nutrition, developmental psychology, psychology, statistics, sociology and ethics. Admission prerequisites vary and should be carefully checked. Applications can be made one year before enrolling while nursing prerequisites are being taken.

Direct-Entry MSN and ND programs for non-nurse college graduates also prepare their students to earn the RN license after the first 12 months of education and training in the program. Master’s programs then require another one, two or sometimes three years depending on specialty area. Doctoral programs require another three years beyond the first year needed to prepare for RN licensure. These programs are typically designed for students who have decided on an advanced practice specialty area in nursing before applying to nursing school. Individuals who are not already RNs have a lot to explore and learn before making such a decision. Some programs require only a BS or BA, a minimum GPA of 2.75 or 3.0, GRE scores, and just a few courses such as a lecture course and lab in biology and in chemistry, a course in statistics and course in psychology. Others require coursework in anatomy, physiology and
biochemistry. Admission prerequisites may include additional courses and recommendation letters. It is critical to review each program's specific admission information. Application deadlines vary but can be as early as October 1 for a program starting in June.

The Nursing Profession

The registered nurse is trained to select and apply theory and research findings to nursing practice in a variety of patient situations and settings, to identify and respond to acute and chronic health problems, to promote health and prevent illness, to evaluate completed nursing research, to participate in professional and community organizations relevant to nursing and to provide leadership as an essential member of the health care team. Nurses are needed in such settings as acute care hospitals, community health agencies, homes, outreach programs, public schools, HMOs and clinics serving poor and rural populations. Career opportunities are particularly good for bilingual persons or minority members. Upon completion of additional academic and practical training, RNs may serve as surgical nurses, psychiatric nurses, public health nurses, nursing administrators, nurse educators or researchers.

Advanced practice nurses are RNs with graduate (post-baccalaureate) academic preparation and advanced clinical skills qualifying them as experts in a defined area of knowledge and practice. Graduate academic preparation in nursing is at the master's and doctoral level. Advanced practice roles include nurse practitioner (NP), clinical nurse specialist (CNS), certified nurse midwife (CNW) and certified registered nurse anesthetist (CRNA).

The nurse practitioner is an advanced practice nurse who specializes in the primary health care needs of individuals and families. Nurse practitioners are skilled health care providers who perform many of the tasks traditionally done by physicians. They can conduct complete medical examinations, diagnose and treat common acute illnesses and injuries, administer immunizations, manage chronic problems like high blood pressure and diabetes, order lab services and X-rays, prescribe drugs and counsel patients on health problems. The NP works in collaboration with physicians and as an independent member of the health care team, working in hospitals, clinics, HMOs, private offices, nursing homes, etc.

Clinical nurse specialists are advanced practice nurses who have advanced clinical expertise in a particular specialty (e.g., oncology, cardiovascular nursing, etc.) in which they provided expert patient care or facilitate clinical research to improve patient outcomes. In addition to clinical practice or research, their responsibilities may include education and consultation. They provide leadership to other nurses in hospital, ambulatory or home care settings.

Choosing to Become a Nurse

Learn as much as you can about nursing. There is no one career path in nursing. Career opportunities for nurses are rich and varied. A flight trauma nurse, a pediatric nurse practitioner, a forensic nurse, a psychiatric nurse, an academic nurse, an infection control nurse, a nurse anesthetist - the list is long; possibilities are everywhere. Learn as much as you can about the distinction between BSN-prepared nurses and master's-prepared nurses. Learn about advanced practice roles and about the many areas of specializations. Web sites, such as www.nurseweek.com/careers/clinical.asp and www.nursingspectrum.com/StudentsCorner/CareersInNursing/ and are places to start. Check out job postings on the website of the National League for Nursing (www.nln.org) to further your knowledge of the variety of roles for nurses. Talk to nurses. Volunteer in a health care setting where there are nurses.

Career Services also offers several publications about nursing careers in our Resource Center, as well as materials to prepare for graduate school admission:

Learn about the educational options for becoming a nurse by reading information on individual programs. Start at www.allnursingschools.com.

Prepare yourself to apply by knowing the admission requirements and planning ahead to fulfill them. If the GRE is required, learn more about it at www.gre.org. If letters of recommendation are required give some thought to who might provided them for you.
