

Computing Educators Oral History Project
Training interview transcript

Mary Z. Last

Interviewer: Alison Young

Recorded Sunday, March 5, 2006

Location: Houston, TX

Corresponding audio available on CEOHP's website, ceohp.org, under "Short Practice Interviews".

This training interview transcript is being made available for research purposes only. All literary rights in the transcript, including the right to publish, are reserved to the Computing Educators Oral History Project. No part of the transcript may be quoted for publication, except by the interviewee, without the written permission of the Director of the Computing Educators Oral History Project.

Request for permission to quote for publication should be addressed to Barbara Boucher Owens, either by email at ceohp@ceohp.org or via postal mail at Computing Educators Oral History Project, Southwestern University, P.O. Box 770, Georgetown, TX 78627-0770 USA. The request should identify the specific passages to be quoted, describe the anticipated use of the passages, and identify the requestor.

We recommend that this transcript be cited as follows:

Mary Z. Last, a training interview from 2006, Computing Educators Oral History Project. Online: ceohp.org.

Conducted during the training session at the 2006 SIGCSE Technical Symposium.

1 [0:00]

2 **Alison Young: This is an interview with Mary Last from Mary Hardin-Baylor University conducted by**
3 **Alison Young. This interview is being recorded on the 5th of March, 2006 in Houston [Texas], USA.**

4

5 **Did I pronounce your name correctly, Mary?**

6

7 Mary Z. Last: Yes.

8

9 **AY: Mary, I note from your C.V. that your first degree was in chemistry. Can you tell us a little bit about**
10 **that and then what led you from chemistry into computer science?**

11

12 **MZL:** Well, I started out to be a physician when I went to college. And I had wanted to be a physician ever since I
13 can remember wanting to be something. Because my mother is a physician. And so when I went to college,
14 she absolutely told me she did not want me to take pre-med because pre-med never prepared you for
15 anything, so that if something happened and I didn't go to medical school I should have a degree in a
16 discipline. So chemistry was the discipline because my father was a chemist. So I chose chemistry as my
17 major, because ... with full intentions of going to medical school.

Computing Educators Oral History Project (CEOHP)

18
19 And things happened and I didn't go to medical school because I did typical things that girls do sometimes
20 when they are in college. They fall in love. And they decide they want to get married. And they don't want
21 to go to school after they get out of college. And you learn better when you're older. But ...

22
23 So when I had that degree in chemistry, towards the end, I thought about teaching; thought about teaching at
24 secondary. And then, DuPont interviewed, E. I. DuPont interviewed at school. And they interviewed for
25 people with chemistry degrees, but they weren't going to work in a lab, which was very interesting to me
26 because I didn't like lab work. I just ... I didn't like lab work and my senior project, I had developed an
27 allergic reaction to the chemicals that I was working with, so I had a hard time finishing my senior project.
28 And the job at DuPont was using computers to index and abstract chemical patents. So it was chemical
29 information systems. And this was back in 1967, at the very beginning. DuPont had this chemical
30 information system that they had developed — very sophisticated system — still, when I think about it, it
31 was really very sophisticated. So, I was offered job doing chemical indexing, abstracting and indexing.

32
33 **AY: You actually worked in the computing industry as ... although you had you degree in chemistry, you**
34 **worked in the computing industry?**

35
36 MZL: Mmm hmm.

37
38 **AY: ... and that's what led to your interest in ...**

39
40 MZL: Yep.

41
42 **AY: ... computer science. Can you tell us more about what you did in your job in industry?**

43
44 MZL: My job in industry, I was ... As I said, I developed systems. I developed ways to categorize chemical
45 reactions and name chemicals so that you could record it into a computerized system and be able to retrieve
46 that — to do searching. So, I was writing systems, if you will, to determine whether a chemical was being
47 used in a reaction as a reagent, or whether it was the product of some reaction. So doing those types of
48 things. And I actually was published as a chemist, because my first two professional publications were in
49 chemical journals. And it was developing information systems, computerized information systems, that
50 would keep track of chemicals.

51
52 **AY: Did they give you any formal training or did you learn ...**

53
54 MZL: We had some training in the beginning. And it was something that I really enjoyed. And I got to be fairly
55 good at it because I managed to get some promotions and then about five years after I started working at
56 DuPont — this system that DuPont had was very expensive and they were paying for it in-house — and they
57 offered it for sale to information companies. And the company ... one of the companies that bought it was
58 Information for Industry [IFI] and they had been publishing journals and things like that. And as part of the
59 “deal”, DuPont said that they would allow several people to go to IFI to start it up. And there were five of us
60 and I was one of the five that was asked to go with IFI. And this is normal for DuPont. If you have ever
61 worn Gore-Tex or anything like that, W. L. Gore worked for DuPont and it was a product DuPont didn't
62 want to pursue, so they told Gore, “If you want to start a company, we'll help you.” And that's exactly how
63 Gore-Tex got started. And so ...

64 [5:01]

65 **AY: So, you went to the new company and developed more systems?**

66

Computing Educators Oral History Project (CEOHP)

67 MZL: Mmm hmm. Developed more systems. We were one of the first ones to develop on-line databases when
68 Dialog ... Dialog Information Services in the early 1970s. We developed a lot of databases, on-line
69 databases, for Dialog — we were available. We did ... started out with chemical patents and then we
70 branched out into career placement. We had the very, very first career placement registry service on-line, so
71 ...

72
73 **AY: So with all this background in computing and developing systems, what led you into education?**

74
75 MZL: Well, when I was working for IFI, I did a lot of training. I did a lot of training. I did a lot of training ...
76 corporate training. I traveled a lot. And everybody in my family is in education, some way or another. And
77 so it kind of ... I don't know whether it's in the genes or what. But I did a lot of training and I really ... I
78 liked to train. And I had an opportunity — circumstances allowed me, I guess, the opportunity to get into
79 education to see whether I would like it and I loved it.

80
81 **AY: And so what led you into the university sector as opposed to training in industry?**

82
83 MZL: What happened was, I actually was doing training when I left the company. My husband was transferred, so
84 we moved to Georgia. And I was doing some training down there and I applied for a job at a community
85 college — it wasn't a community college, it was a junior college. And it was very interesting because when
86 they asked me if I could teach certain courses, I said "Oh no, I don't think I could teach that." And so I never
87 got another interview. And I went back to working with the computer things, I was working as a consultant
88 and doing some traveling. And about two years later, somebody that I worked with in a volunteer situation
89 said, "I think you would be wonderful teaching at the junior college." And I said, "Well, I don't know." And
90 they said, "Well, I know the Provost and I told him I think you would be great. Send your resume." So I sent
91 my resume and I was interviewed by the same person that had interviewed me two years before, who didn't
92 remember me. And he said, "Could you teach so and so?" And I said, "Oh yes, I can teach that." So, I
93 learned my lesson. So, like every other teacher, when you're told you are going to teach something. you
94 learn it first and then you teach it.

95
96 **AY: And you were able to teach it?**

97
98 MZL: Yes. You know, I gave it my best shot.

99
100 **AY: Thank you, Mary!**

101 [7:42]
